Accessories

- Wide range of sensors used to introduce input variables into the Controller Area Network (CAN).
- Side Mount Level switches are ideal for tank level applications with most commonly used liquids.
- Multi-voltage on most sensors & switches.
- An I/O Module or PDM provides a pathway for analogue signals into the network, these can be found on page 46 & 50-51.
- All sensors environmentally sealed – IP67.

Does your sensor require a module?

Analogue Sensors require an I/O Module (found on page 46) or a PDM (found on page 50-51) in order to transmit sensor data onto the Controller Area Network (CAN).

Analogue Sensor

I/O Module or PDM

Pressure/Temperature Sensor

CAN Sensors, such as CMP0.5.0M, do not require an I/O Module or a PDM.

 1 x DT Detector Wedgelock (W2S-SDT-12V or W2S-SDT-24V)
 2 x Solid Socket

Accessories

- Overlay detection data for up to 2 radar sensors on a single monitor.
- Compiles with CAN 2.0A Base Frame Format.
- Detects multiple moving and stationary objects.
- High frequency continuous wave provides increased reliability & low false alarm rates.
- Adjustable detection range up to 30m.
- 3 trigger inputs used for activating components such as alarms and beacons.
- Environmentally sealed sensor – IP69K
- Sensor can be steam & pressure cleaned.
- Multi-voltage.
- 3 year warranty.

Voltage :	12-24V
Current Draw :	0.4A
Radar Frequency :	24.05GHz to 24.25GHz
Weight :	Radar Sensor 0.7kg
Vibration :	8.3G
Shock :	100G
EMC :	CE & 'e' marked
Operating Temperature :	-40°C to 85°C
Ingress Protection :	IP69K

Backsense Network Radar

Brigade's Backsense® Network Radar is the next generation of radar-based obstacle detection. Due to the number of complex blind spots on a vehicle, a single radar cannot always provide the detection required. Additionally, multiple in-cab displays for multiple radars can be more of a distraction than a benefit. Aimed at OEM and specialist applications, Brigade's Network Radar OSD kit allows you to connect and link 2 sensors to cover large, sometimes complex blind spot zones around a vehicle or machine.

On-Screen Display

Multiple radars with individual in-cab displays can cause confusion and also be a challenge to install. Brigade's latest innovation, the Backsense® OSD (On-screen Display) ECU allows for the use of 2 Backsense® Network Radar units to be combined with any Brigade Backeye® camera system.

Radar detection data is overlaid transparently* along the edge of the monitor so as not to obscure the camera image with the audible warning via the monitor speakers.

* Transparency level can be adjusted via software.

When an object is detected in the YELLOW zone, the associated on-screen indicator will turn yellow and a pulsed audible alert is played through the monitor's speaker. 📢)))))) 📢))

When object is detected in RED zone, the associated on-screen indicator will turn red and a constant audible alert is played through the monitor's speaker. 📢))))))))) 📢)))))))))

Each radar sensors detection notification can be assigned to one of eight predefined positions overlaid around the edge of a monitor.

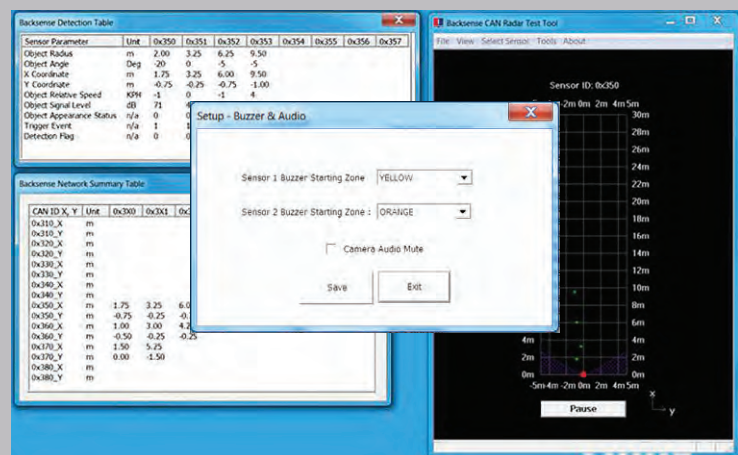

Configurable

Backsense® Network Radar with OSD Kit is supplied with easy to use PC software used to adjust the following parameters:

- Detection zone length & width
- Blind area mapping
- Buzzer starting zone
- Trigger output length

Download the latest software and manual from ionnic.com

Backsense Network Radar – OSD Kit ★

Part No.	Detection Distance (m)	Detection Width (m)	Camera Inputs	Triggers Input	Triggers Output*
BS-9001-OSD	3 – 30	2 – 10	2	3	3 x 0.5A

Supports up to 2 Backsense® Network Radars.

Compatible with Brigade Backeye systems, including Backeye 360 and Brigade Digital Mobile Recorder.

* 1 x output for alarm use only.

Kit contents:

- 1 x Sensor Unit (BS-9000)
- 1 x OSD ECU
- 3 x Network Y Cable (BS-00NYC)
- 2 x CAN Bus Terminator (BS-00NT)
- 1 x 9m Extension Cable (BS-09DCX)
- 1 x Network Power Input Cable (BS-02PIC)
- Sensor Mounting Hardware

Controller Area Networks (CAN)

Controller Area Networks, or CAN are multiplexed control systems. Multiplexing allows multiple data signals to travel on the same wires, integrating separate electronic systems and applications to a single point of control and monitoring system.

J1939/11

J1939/11 is a 3-wire system that uses the TE DEUTSCH DT series connectors primarily for truck and bus. The DT series accepts size 16 contacts. Connector options include in-line, bulkhead, "Y" splitter, and terminating resistors.

CAN Connectors – J1939/11 – Common Components

Accessories

HD30 Breakaway

- Breakaway coupling specifically designed to prevent damage to vehicle wiring and/or the attached implement by safely disconnecting and separating from vehicle in the event of an operator driving away without disconnecting beforehand.
- Dust cap suits all shell size 24 HD30 and HDP20 series connectors.
- Ideal for use in agricultural equipment as well as the truck, bus, mining and construction industry.
- Environmentally sealed – IP68, IP6K9K, when installed to manufacturer's specifications.
- Resistant to most fluids in industrial applications.

HDBOX-24-91PN – Breakaway CAN Termination Assembly

Originally designed for agricultural applications, the TE DEUTSCH HDBOX-24-91PN Breakaway CAN Termination Assembly creates a communication pathway between an on-board CAN system and the electronic components on an attached implement.

The HDBox, which holds two DT13 connectors and an HD30 Series receptacle, mounts on the vehicle and mates with an HD30 Series plug connector featuring a breakaway coupling ring.

TE DEUTSCH breakaway couplings are designed to prevent damage to the CAN wiring of the vehicle and/or the attached implement by disconnecting and separating from the vehicle in the event of an operator driving away without disconnecting beforehand.

O462-201-1631	Contact – Socket – Solid – Gold-plated – Size 16	

Accessories

- Range of data cable available – Standard, Medium, Heavy Duty and Shielded.
- Noise suppressing ferrites available – Ø 19.3mm & Ø 27mm.
- Wide range of crimping tools available.
- HDT-48-00 crimps a wide range of contact sizes with no need to change out dies or locators.
- Ratcheting tools will not release contact until a full crimp is completed.

Noise Suppression

Electromagnetic interference (EMI), also referred to as noise, is disturbance that affects an electrical circuit due to either electromagnetic induction or electromagnetic radiation emitted from an external source.

The disturbance may interrupt, obstruct, or otherwise degrade or limit the effective performance of the circuit. These effects can range from a simple degradation of data to a total loss of data.

A simple solution to electrical interference from noise is the utilisation of suppression ferrites. Ferrites are moulded metal powders, (ceramic), cast into various shapes and sizes.

Ferrite with Key (7427155)

A typical style of ferrite are clip-on chokes/suppressors. Simply open and snap around the wires or cables emitting the noise.

You can stack as many as you want over a single pair or bundle of wires. In situations with severe noise problems multiple ferrites can be stacked.

Ferrites are non-conductive so can be used almost anywhere, including on higher voltage power lines and battery/inverter cables.

5 Piece Crimp Tool Set for Packard™ Contacts

Tool Set contains tools suitable for:

- AMP Superseals
- Weather-Pack
- Metri-Pack 150, 280, 480 & 630 series
- Micro-Pack 064, 100 & 100W series.
- GT 150, 280, 630 series
- And other brands including Molex, Yazaki, Sumitomo etc

All housed in a handy storage tray.

Also included in the kit is a 32 page instruction manual detailing tool specifications as well as an OEM contact number/tool number matrix.

All tools in kit are premium quality – made in the USA.

Made in North America

Wiring, Accessories & Tools – IONNIC Crimping Tool Set – Packard Contacts

Part No.	Description
HT-K2680	5 piece crimping tool set for wide range of contacts, includes instruction manual Suits AMP Superseals, Weather-Pack and Metri-Pack contacts among others. For full list see above
